

StandardTolerance_table Sheet Metal_part

	Typical	Feasible
Materials:	Plastic Aluminum Cold Rolled Steel Copper Stainless Steel	
Standard tolerance:	± 0.002 to 0.010	

Note that the values represent normal production practice at the most economical level. Greater accuracy should only be specified where required to avoid additional prices. Disclaimer: All tolerance specifications reflect the approximate range of a process's capabilities and should be viewed only as a guide. Actual capabilities are dependent upon manufacturing, equipment, material, and part requirements.
